

Fintech dots, connected.

We are the technology partner for your business

Agile Team

The Agile methodology involves working in short, iterative phases called sprints. This approach lets you focus on the priority features (task lists) and requirements (backlog). The goal of each sprint is to provide a core value (e.g., functionality). Before each sprint, the team estimates the time and resources needed to implement a particular value. At the end of each sprint, the retrospective takes place - a summary meeting to analyze current achievements and opportunities to optimize the process.

Thanks to this strategy, Agile methods allow us to provide market value frequently. They also improve transparency and budget control. For all processes, we focus on key project elements.

Strengths

- ✓ Project scope flexibility and the ability to modify assumptions.
- ✓ Transparent finances and budget control.
- ✓ The Client is always close to the project and engaged with the service provider in a constant process.
- ✓ Immediate copyright transfer.
- ✓ The fastest form of system validation in production environments and market conditions.

Opportunities

- ✓ Quick validation of business assumptions allows for immediate feedback.
- ✓ Flexible reaction to the market and external factors.
- ✓ Ability to control quality and assign priorities to individual modules.

Weaknesses

- ✓ No detailed technical and functional requirements at the beginning of the project (broadly defined goal).
- ✓ Dynamic changes in business assumptions can generate a high level of abstraction.
- ✓ No guarantee that the initial budget will meet all business assumptions.

Threats

- ✓ Releasing a project with potential bugs.
- ✓ A risk of overly focusing on a single module and losing the big picture.
- ✓ The process of providing comments on the finished product might be inefficient.

Enhance your vision
through **digital**
transformation.

Our approach involves strategic thinking, proven methodologies, and extensive industry expertise to develop solutions that align closely with your business objectives.

Our design process incorporates your brand's voice into the user interface, resulting in an experience that is authentically "you".

Distinct your business attributes into captivating digital experiences.
